BOOK READ EDITION

Money is one fifth of the score

Sahil Bloom's argument is that you are running five accounts and only one of them has a readout you check. The other four are just as real, and they go unmeasured until something breaks.

CONTENTS

1 The count

Bloom opens with arithmetic, not philosophy. He ran the numbers on time left with his parents and moved across the country because of the answer. It was always true and simply never counted.

~15 visits left, once a year from mid sixties	**5** accounts you are already running	**1** with a live readout

2 The five

Five accounts, running at once, trading against each other. A season can justify draining one. A decade cannot.

Time
Control over how your hours are spent.
The one machines give back. Spend the refund on purpose.

Social
Depth of connection, not size of network.
The least copyable. Nobody outsources being known.

Mental
Purpose, curiosity, room to grow.
Shifts from having answers to asking better questions.

Physical
Health and energy to use the rest.
Unautomatable. No model does your sleep for you.

Financial
Enough, defined by you, not by comparison.
The loudest score, and the one most exposed to disruption.

3 The shift

Automation changes what each account is worth, and it does not change them evenly.

- Time is the account AI actually credits. It removes hours from the work that was never the point.
- A refund you do not assign gets spent for you. More output at the same pace is the default, and it is a choice nobody made.
- The three it cannot touch are the physical one, the social one, and your own judgement (the call you make when the tool has no answer).
- Financial is the most exposed. It is the score tied to work that is being rewritten right now.

4 Your move

THE ONE IDEA

You do not drift out of the four quiet accounts. You withdraw from them, in small amounts, to pay into the loud one. Counting is what turns the drift back into a choice.

Pick the account you have been quietly withdrawing from and make one deposit this week.

- Count something. One number, honestly measured, on the account you avoid looking at.
- Name where the hours AI gives back are going, before they go somewhere on their own.
- Make the deposit small enough that it survives a bad week.

Read the book, then do the arithmetic on the one account you would rather not measure.

THE TAKEAWAY

Wealth is not one number getting bigger. It is five accounts, and the quiet ones are the ones you will miss.
