PROFESSIONAL SUMMARY

Rutgers Finance Graduate with hands-on experience advising top-tier financial institutions on digital transformation, Salesforce pipeline strategy, and workflow optimization at scale. Proven ability to support millions in annual deal volume, manage hundreds of opportunities, and serve high-net-worth clients. Wealth management grounding from Corient. Combines a strong analytical foundation with a growing focus on leveraging AI tools to elevate business performance, automate strategic processes, and drive measurable results.

WORK EXPERIENCE

Accenture LLP, Morristown, NJ

May 2023–Feb 2026

Business Consultant

- Owned the deal workflow for a book of financial institutions (Mizuho, SMBC, MUFG, Dai-ichi Life): 200+ concurrent opportunities against \$50M+ in annual volume, as the single point between the client and delivery.
- Drove platform adoption past launch for Morgan Stanley's Home Loans division: wrote the user stories, ran the sprint cadence, and reported business-unit value on rollout so the people funding it could see what had changed.
- Acted as subject matter expert and primary liaison between clients, business users, and cross-functional teams, gathering intel on key initiatives to support account expansion.
- Redesigned how work entered and moved through the delivery queue across concurrent engagements, cutting backlog 30% in six months and raising sprint velocity.

Corient, Morristown, NJ

Mar 2022–Jul 2022

Wealth Management Intern

- Supported 20+ high-net-worth clients (\$5M+ portfolios) across retirement, tax, investment, and estate strategies while conducting due diligence on 90+ investment funds to evaluate prospectus alignment, benchmark performance, and risk parameters.
- Led a Capstone advisory engagement applying financial planning principles to increase portfolio efficiency and generate \$100K+ in projected tax savings.

AI SYSTEMS & PRODUCT FLUENCY

- Build and run a personal operations system daily: 8 domain agents on scheduled loops over 1,400+ files of notes, scripts and records, with 86 skills (51 custom) behind a meta-dispatcher. Not a demo. The system I depend on to reconcile trades, run a job search and ship writing.
- Ship AI workflows end to end and drive my own adoption of them. A weekly review pipeline takes a broker export, a market calendar and session notes, and returns reconciled records, self-rendered charts, a graded assessment and a two-page PDF, on a schedule, whether or not I remember it exists.
- Engineer pre-action gates that catch classes of automation error before execution — cost and blast radius, irreversible deletion, identifier verification, negative-result verification. An operational risk control layer applied to AI output. Each one was written the day after something broke.
- Build products on the stack, not just with it. jot, a capture app where the prompt is the schema and paragraph-level timestamps make the pause between thoughts measurable. Fablewick, an open-source AI storybook library on a provider-agnostic model layer.
- Ship programmatic document pipelines (ReportLab + matplotlib, Playwright HTML to PDF) that reconcile to a source export before layout.

EDUCATION

Rutgers University, **Rutgers Business School** – New Brunswick, NJ

May 2023

Bachelor's in Science, Finance | Honors: Dean's List, 2019-2023

3.81 GPA
